Engineering Drawing (EDG)
Revolutionizing Industrial Design with Industry 4.0, AI, and On-Chain
Transparency

Version 1.1 (Mainnet) — 21 Aug 2025

Quick Facts	
Network	BNB Smart Chain (BSC)
Mainnet Date	21 Aug 2025
Total Supply	99,999,999 EDG (18 decimals)
Token (EDG)	0xa90Cc0137FDA4285Eaa6da0f7a5118A1432b2a76
Presale	0x944483c8083827A8BF09c12cFC57DB6a5b22697A

Overview

EDG brings AI/IoT and verifiable blockchain records to modern industrial design—from refineries
and pharma to environmental systems. Presale, vesting, and treasury flows are transparent and
on-chain. This document combines essentials for buyers/partners with practical rationale for why
EDG matters in Web3 and the real world.

Contracts & Transparency

The dApp displays live presale metrics and auto-refreshes. If the BNB price shows $0 in the UI,
switch pricing to ORACLE mode or set a manual BNB price from the owner panel. All purchases
and totals can be verified on BscScan using the addresses above.

Presale Stages (Mainnet)

Stage	EDG for Sale	Price (USDT)	Status
1	5,000,000	0.02	LIVE
2	10,000,000	0.03	Pending
3	15,000,000	0.05	Pending

Allocation Source	Presale Source: Community Development (30% of total supply).
Wallet Limits & Operations	Per-wallet limits enforced on-chain. Current UI: Min 50 EDG, Max 500,000 EDG.
Pricing Modes	Pricing supports ORACLE (Chainlink) or MANUAL mode to ensure continuity if feeds a
Stage Controls	When a stage sells out, the next stage opens automatically; admin navigation is availa

Tokenomics

Community Development	30%	Presale source. Programmatic releases for grants, growth & inte...
Environment Program	25%	36-month lock; ~10% of allocation / yr thereafter for sustainabilit...
Team & Management	15%	36-month lock; ~5% of allocation / yr thereafter to align long-term...
Marketing & Promotion	10%	Programmatic releases tied to milestones & public updates.
Liquidity & Risk Management	20%	Initial liquidity + buffers for audits, security, and market stability.

How to Participate

• Connect a BSC wallet (e.g., MetaMask).
• Enter the BNB amount (e.g., 0.01 BNB) and review estimated EDG for the current stage.
• Confirm the transaction in your wallet; verify on BscScan after confirmation.

Security, Pricing & Operations

• Non-upgradeable contracts reduce attack surface.
• ORACLE or MANUAL pricing modes safeguard continuity.
• Owner functions limited to operations: pause/start, stage navigation, wallet limits, deposit/withdraw, pricing mode.
• Transparency: monthly reports on raised BNB, EDG sold per stage, treasury balances, and goals.

Why EDG in Web3 & the Real World

• On-chain accountability for treasury/distribution builds durable trust.
• Programmable vesting and milestone payouts reduce execution risk for grants and programs.
• AI-assisted engineering tools (e.g., MVR evaporator designer with HMBD/P&ID; export) deliver immediate, real-world value.
• A shared token aligns learners, engineers, and contributors—turning platform growth into community benefit.

Why EDG is Well-Positioned for the Future

• Clear utility from day one: engineering calculators, auto-generated documentation, and paid downloads.
• Disciplined tokenomics with long locks for team and programs; liquidity allocation for market stability.
• Operational resilience via pricing fallbacks and stage controls.
• Transparent reporting, BscScan verification, and a roadmap that prioritizes real deployments.

Roadmap

• Q3–Q4 2025: Complete Stage 1–3; publish monthly transparency; initiate industry pilots.
• Q1 2026: Governance proposals; first environmental grant; liquidity expansion.

• 2026+: Industry integrations (refinery/pharma/environmental), AI toolkits, open design library.

Risks & Disclaimers

Smart-contract, market, and regulatory risks exist. EDG is a utility token for access and governance within the EDG ecosystem—not an investment contract. Users must comply with local laws. On-chain transactions are irreversible.
